## EphMRA/Intellus Worldwide Classification Committee

WHO WE ARE. WHAT WE DO. 2020

## Background

- Pharmaceutical products worldwide are grouped into categories in sales, medical, and promotional audit services according to the EphMRA/Intellus Worldwide Anatomical Classification System
  - Virtually all pharmaceutical audits around the world are based on this system
  - IQVIA and other secondary data suppliers use this classification
- The Anatomical Classification brings order and standardization, enabling market researchers to analyze therapeutic markets and to compare similar products
- **Responsibility for maintaining** the integrity of the system, meeting the demands of the evolving marketplace, and reviewing and approving the classification of individual products **lies with the Classification Committee**
- The World Health Organization (WHO) adapted the system for its own needs to create a separate ATC classification for clinical use.

# **COMMITTEE MEMBERSHIP**

#### Benefits of Committee Membership

Committee membership provides colleagues with unique developmental opportunities and interaction with other industry colleagues. The Committee is a global working group from multiple organizations and multiple companies.

- Provides colleagues from member companies a seat at the table to review and discuss classification issues that may impact their business:
  - While Committee members are expected to be unbiased in their assessments, it is acknowledged that each member can present their corporate interests where applicable
  - The Classification Guidelines are the principles that determine classification issue outcomes

#### Benefits of Committee Membership (continued)

- Allows colleagues very early insight into new developments and to have an impact on how market classifications are structured in the future
- Contributes to broadening drug class and overall industry knowledge
- Provides an opportunity to contribute in a meaningful way to the continued evolution of the Pharmaceutical Industry

#### **Committee Membership**

- The Anatomical Classification Committee is made up of approximately ten members from pharmaceutical companies
- The Committee consists of individuals from EphMRA Industry member companies in Europe plus one full member from Intellus Worldwide
  - There is a position for Liaison members from Japan and China
  - IQVIA is represented on the Committee as a non-voting member
- The primary qualifications for membership are knowledge of the international pharmaceutical market and its products, and current experience with global secondary databases
  - Within the Committee, there are two categories of membership: full position and apprentice position (determined by level of experience)

#### **Committee Membership**

- The Committee meets four times each year for approximately 1.5 days.
  - Members of the Committee rotate hosting the meeting
- Each member has a primary responsibility for one or more therapeutic categories
- In order to add value to the industry and the Committee, members are encouraged to be part of the Committee for at least two years
- This medium to long-term commitment will also enhance the experience for the Committee member
- Members are expected to attend (in person) at least 3 meetings per year and their organization must be prepared to fund their T&E
- When positions on the Committee are available, nominations for members who meet the qualifications are sought from member companies
- Industry member volunteer who ask to join the Committee are also considered

# **DETAILED INFORMATION**

## Schedule of Committee Meetings/Activities

- Q1 WHO Harmonization Meeting Review annual changes to both classifications, seek areas of alignment, review future anticipated developments
- Q1 Classification Meeting Review new/existing investigations and finalize proposals ready for voting
- Annual Voting (May/June) of new classes
- Q2 Classification Meeting Review outcome of annual voting on new classes; review new/existing investigations
- Q3 Classification Meeting Refine detailed rules of newly voted classes; review progress on new/existing investigations
- Q4 Classification Meeting Finalize new class guidelines; review progress on new/existing investigations; determine list of proposals ready for voting the following second quarter.

## History

- Pharmaceutical sales audits were introduced in the 1950s.
  - Most of these audits were based on similar classification systems but there was some variation
- There was therefore a need to have one unified classification system for comparability
  - Development of the current Anatomical Classification began in 1968
  - It was developed by market researchers of many European-based international pharmaceutical companies
  - Market researchers from international pharmaceutical companies in Europe and USA participated in translating the old system into the Anatomical System

#### Anatomical Classification System Overview

- The Anatomical Classification System is based on a cascade:
  - Products are grouped by anatomical site of action, indication, mechanism of action or composition
  - The 2nd level gives details of the 1st, the 3rd of the 2nd, and the 4th of the 3rd
- Importantly, individual products are classified, not substances.
  - "Product" is defined as a pack or unit that can be dispensed, prescribed, etc.
  - Each product pack (SKU) is assigned to one category

## **Creating New Classifications**

- To create a new class within the system, there must be:
  - a compelling need for a new class
  - <u>and</u> a substance with an approved indication launched in at least one country
  - <u>and</u> a second, <u>different</u> substance in registration and expected to be launched soon
- A one-substance class will not be created
- New classes can be suggested by EphMRA/Intellus Worldwide members, non-EphMRA/Intellus Worldwide members, or the Committee
  - Proposals should be clearly stated and the impact of the change to the system should be outlined
  - The proposal is carefully reviewed by the entire Committee, which consults, as needed, with appropriate involved member companies and sometimes with medical input
  - The purpose is to find out if there is general consensus that the system should be modified and what the changes should be
  - The responsible Committee member finalizes the proposal
  - The finalized proposal with background information is sent out to the full EphMRA/Intellus Worldwide membership for voting in the second quarter of each year

#### **Classification Restructure Proposal: Voting Requirements**

- Proposals for a restructure of the classification are prepared by the Committee
  - Proposals are then voted on by the EphMRA/Intellus Worldwide membership
- Industry members of EphMRA and/or Intellus Worldwide are entitled to vote
  - Each member company is entitled to one vote
  - A "company" is defined as a corporate entity
  - This means there is one vote per corporation, regardless of the number of affiliates or subsidiaries
- The proposals need the approval of a 2/3 majority of the voting companies to pass
- If approved, the new classes are implemented in the first audit of the following year

#### Harmonization with WHO

- In the 1970s, WHO adapted the EphMRA system for its own needs. This became the system that the WHO calls the Anatomical Therapeutic Chemical system (ATC)
  - At the present time, the two systems are similar but are designed to meet two different goals
  - The purpose of the WHO ATC is to meet the needs of teaching, clinical trials, health organizations, and governments
  - The EphMRA/Intellus Worldwide Anatomical Classification system aims to meet the needs of marketing research and marketing
  - The WHO ATC classifies substances while the EphMRA/Intellus Worldwide Anatomical Classification system classifies products
- Since 1991, EphMRA and WHO meet annually to harmonize the systems in order to avoid confusion between the two systems
  - A high level of harmonization has been achieved

#### Access to the EphMRA/Intellus Worldwide Guidelines

- The Guidelines to the Anatomical Classification System describe the types of products included in each class
  - Annual Classification changes are also available in an annual report posted on the Intellus Worldwide and EphMRA websites
- The Guidelines and annual changes can be obtained through the EphMRA internet site (<u>www.ephmra.org</u>) or the Intellus Worldwide internet site (<u>www.intellus.org/Member-Resources/Ephmra-Classification</u>), or by writing to the General Manager of EphMRA or the Chief Financial Officer of Intellus Worldwide

Bernadette Rogers General Manager, EphMRA generalmanager@ephmra.org

Carol Reilly Chief Financial Officer, Intellus Worldwide Email: carol@intellus.org
